Q: Do black-tailed jackrabbits fear the European wildcat?	Q: Do black-tailed jackrabbits fear the European wildcat?	Q: Do black-tailed jackrabbits fear the European wildcat?	Q: Do black-tailed jackrabbits fear the European wildcat?
Hint: Reflect on the natural habitats and geographical distributions of both species. Consider their potential interactions and whether the jackrabbit would have reason to fear the wildcat. A: The answer is no.	Hint: Consider the natural role and geographical distribution of black-tailed jackrabbits and Q1. Are black-tailed jackrabbits prey animals? Black-tailed jackrabbits are prey animals. Q2. Do Black-tailed jackrabbits live in Europe? No Final answer: Do black-tailed jackrabbits fear the European wildcat? A: The answer is no.	Hint: Consider the natural habitats and geographical distribution of the two species. Relevant Information: Black-tailed jackrabbits are native to North America Plan: 1. Determine the geographical distribution both 2. Compare their geographical distribution Answer: No, The answer is no.	Hint: Consider the natural habitats of black-tailed jackrabbits and European wildcats and whether their paths would cross. A: Black-tailed jackrabbits are native to North America. European wildcats are native to Europe. Thus, their paths would not naturally cross. So the answer is no.
